# **NAME**

CURLMOPT\_MAX\_PIPELINE\_LENGTH - maximum number of requests in a pipeline

# **SYNOPSIS**

#include <curl/curl.h>

CURLMcode curl\_multi\_setopt(CURLM \*handle, CURLMOPT\_MAX\_PIPELINE\_LENGTH, long max);

# DESCRIPTION

Pass a long. The set **max** number will be used as the maximum amount of outstanding requests in a pipelined connection. Only used if pipelining is enabled.

When this limit is reached, libcurl will use another connection to the same host (see *CURL-MOPT\_MAX\_HOST\_CONNECTIONS(3)*), or queue the request until one of the pipelines to the host is ready to accept a request. Thus, the total number of requests in-flight is *CURLMOPT\_MAX\_HOST\_CONNECTIONS(3)* \* *CURLMOPT\_MAX\_PIPELINE\_LENGTH(3)*.

# **DEFAULT**

5

# **PROTOCOLS**

HTTP(S)

# **EXAMPLE**

**TODO** 

# **AVAILABILITY**

Added in 7.30.0

# **RETURN VALUE**

Returns CURLM OK if the option is supported, and CURLM UNKNOWN OPTION if not.
