NAME
      CURLOPT_NOPROGRESS − switch off the progress meter

SYNOPSIS
      #include <curl/curl.h>

      CURLcode curl_easy_setopt(CURL *handle, CURLOPT_NOPROGRESS, long onoff);

DESCRIPTION
      If *onoff* is to 1, it tells the library to shut off the progress meter completely for requests done with this *handle*. It will also prevent the *CURLOPT_PROGRESSFUNCTION(3)* from getting called.

      Future versions of libcurl are likely to not have any built-in progress meter at all.

DEFAULT
      1, meaning it normally runs without a progress meter.

PROTOCOLS
      All

EXAMPLE
      CURL *curl = curl_easy_init();
      if(curl) {
       curl_easy_setopt(curl, CURLOPT_URL, "http://example.com");

       /* enable progress meter */
       curl_easy_setopt(curl, CURLOPT_NOPROGRESS, 0L);

       /* Perform the request */
       curl_easy_perform(curl);
      }

AVAILABILITY
      Always

RETURN VALUE
      Returns CURLE_OK.
