NAME
　　　CURLINFO_PROXYAUTH_AVAIL – get available HTTP proxy authentication methods

SYNOPSIS
　　　#include <curl/curl.h>

　　　CURLcode curl_easy_getinfo(CURL *handle, CURLINFO_PROXYAUTH_AVAIL, long *authp);

DESCRIPTION
　　　Pass a pointer to a long to receive a bitmask indicating the authentication method(s) available according to the previous response. The meaning of the bits is explained in the *CURLOPT_PROXYAUTH(3)* option for *curl_easy_setopt(3)*.

PROTOCOLS
　　　HTTP(S)

EXAMPLE
　　　TODO

AVAILABILITY
　　　Added in 7.10.8

RETURN VALUE
　　　Returns CURLE_OK if the option is supported, and CURLE_UNKNOWN_OPTION if not.

SEE ALSO
　　　curl_easy_getinfo(3), **curl_easy_setopt**(3),
