NAME
      CURLOPT_CERTINFO – request SSL certificate information

SYNOPSIS
      #include <curl/curl.h>

      CURLcode curl_easy_setopt(CURL *handle, CURLOPT_CERTINFO, long certinfo);

DESCRIPTION
      Pass a long set to 1 to enable libcurl's certificate chain info gatherer. With this enabled, libcurl (if built with OpenSSL, NSS or GSKit) will extract lots of information and data about the certificates in the certificate chain used in the SSL connection. This data may then be retrieved after a transfer using *curl_easy_getinfo(3)* and its option *CURLINFO_CERTINFO*.

DEFAULT
      0

PROTOCOLS
      All TLS-based

EXAMPLE
      TODO

AVAILABILITY
      Added in 7.19.1

RETURN VALUE
      Returns CURLE_OK if the option is supported, and CURLE_UNKNOWN_OPTION if not.

SEE ALSO
