NAME

CURLINFO_ACTIVESOCKET – get the active socket

SYNOPSIS

#include <curl/curl.h>

CURLcode curl_easy_getinfo(CURL *handle, CURLINFO_ACTIVESOCKET,
          curl_socket_t *socket);

DESCRIPTION

Pass a pointer to a curl_socket_t to receive the active socket used by this curl session. If the socket is no longer valid, *CURL_SOCKET_BAD* is returned. When you finish working with the socket, you must call *curl_easy_cleanup(3)* as usual on the easy handle and let libcurl close the socket and cleanup other resources associated with the handle. This is typically used in combination with *CURLOPT_CON-NECT_ONLY(3)*.

This option was added as a replacement for *CURLINFO_LASTSOCKET(3)* since that one isn't working on all platforms.

PROTOCOLS

All

EXAMPLE

TODO

AVAILABILITY

Added in 7.45.0

RETURN VALUE

Returns CURLE_OK if the option is supported, and CURLE_UNKNOWN_OPTION if not.
